

A Lesson on Hepatitis B That Could Save Your Life

CDC recommends Asian Americans get tested for hepatitis B

The infographic is set against a dark blue background. At the top, a white stroller icon is next to the text 'Most people were infected at birth or in early childhood.' To its right is a red blood drop icon with a blue prohibition sign over it, with the text 'Hepatitis B is spread through direct contact with infected blood.' Further right is an icon of a plate of food, a fork, a knife, and a spoon, with the text 'Sharing food or utensils will not spread the hepatitis B virus. It does not spread through air.' In the center is a large circular diagram of a human liver. To the left of the liver, the text 'Hepatitis B is the leading cause of liver cancer for Asian Americans.' is written. Below this is an icon of a doctor in a white coat with a blue cross on the chest. To the right of the liver, the text 'Ask your doctor about getting tested for hepatitis B. Treatments are available that can save your life.' is written. A cartoon doctor with dark hair, glasses, and a white lab coat over a green shirt and blue tie stands on the right side of the infographic, holding a clipboard and pointing a stick at the liver diagram.

Most people were infected at birth or in early childhood.

Hepatitis B is spread through direct contact with infected blood.

Sharing food or utensils will not spread the hepatitis B virus. It does not spread through air.

Hepatitis B is the leading cause of liver cancer for Asian Americans.

Ask your doctor about getting tested for hepatitis B. Treatments are available that can save your life.
